

Garage Parking using Paper Tickets

Transparent Wireless Systems, LLC

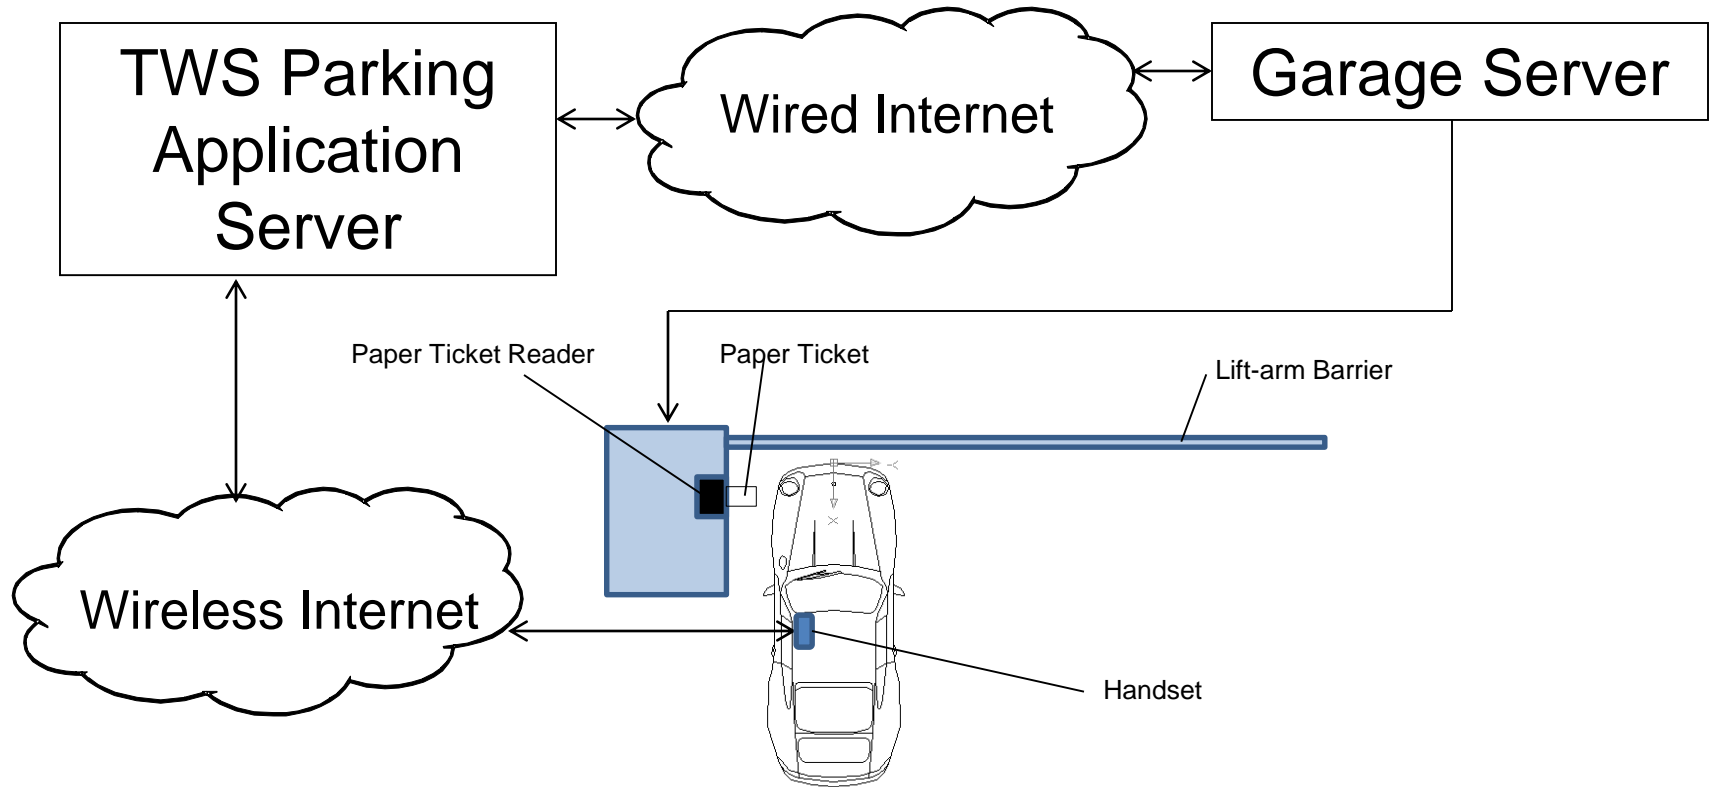

Version 3.0

9/17/2020

Start Parking

Garage Parking: Start Parking

Garage Parking: Start Parking

User drives up to entrance gate

Phone reads & remembers Garage/Gate ID

Garage Parking: Start Parking

Option 1: Automatic estimation of ticket issuance time

- Phone remembers time when BLE signal is maximum.
- This time is the user's estimated time of ticket issuance

User takes paper ticket from ticket dispenser in the usual

Garage Parking: Start Parking

Garage Parking: Start Parking

Garage Parking: Start Parking

Garage Parking: Start Parking

- Prompted by
 - *Car going out of BLE coverage as it enters the garage*
- Handset sends a message to Parking Application Server to start a session.
 - Message contains
 - User ID (proxy: Session ID)
 - Garage/Gate IDs
 - Estimated time of ticket issuance
- Above info is forwarded by Parking Application Server to Garage Server with request to initiate a session

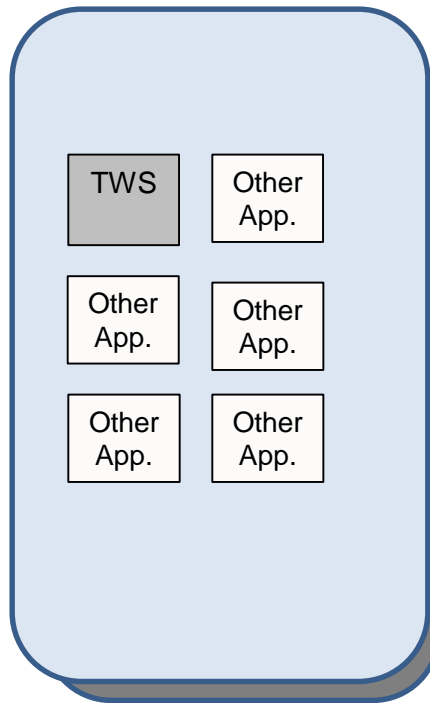

Garage Parking: Start Parking

- Parking Application Server and Garage Server exchange messages
- Ticket held by user is identified by Garage Server on the basis of Estimated Time of Ticket Issuance
 - Ticket ID and Session ID are linked
- Ticket is cleared for exit by Garage Server
- Garage Server notifies the Parking Application Server that ticket has been cleared for exit
- Parking Application Server sends “Accepted” message back to Handset.
 - This tells the user that his payment method has been accepted by the garage

End Parking

Garage Parking: End Parking
